Detailed Answers to Key Test Questions

This section provides model answers to common questions found in accounting chapter 9 test answers. The explanations emphasize accuracy and clarity, ensuring that concepts are well understood and correctly applied.

Sample Question 1: Journalizing Transactions

Question: How is a purchase of office supplies on credit recorded in the journal?

Answer: The purchase of office supplies on credit increases the Office Supplies account (an asset) and increases Accounts Payable (a liability). The journal entry is:

- Debit Office Supplies
- Credit Accounts Payable

This entry reflects that supplies were acquired but payment is deferred.

Sample Question 2: Preparing a Trial Balance

Question: What is the purpose of a trial balance, and how is it prepared?

Answer: A trial balance is prepared to verify that total debits equal total credits in the ledger after posting transactions. It lists all accounts with their debit or credit balances. If the totals do not match, it indicates errors in journalizing or posting. The trial balance includes:

- Account titles
- Debit balances
- Credit balances

Sample Question 3: Adjusting Entries

Question: Why are adjusting entries necessary, and provide an example.

Answer: Adjusting entries ensure that revenues and expenses are recorded in the period they occur, adhering to the matching principle.
