Sample Questions and Solutions

Reviewing sample questions from the algebra 1 chapter 2 test with corresponding answer key solutions helps solidify understanding. Below are examples representing the types of problems commonly encountered.

Sample Question 1: Solving a Linear Equation

Question: Solve for x : $3x + 5 = 20$

Answer Key Solution: Subtract 5 from both sides: $3x = 15$. Then divide both sides by 3: $x = 5$.

Sample Question 2: Graphing an Inequality

Question: Graph the inequality $y < 2x + 3$.

Answer Key Solution: First, graph the line $y = 2x + 3$ as a dashed line because the inequality is strict ($<$). Then shade the region below the line to represent all points where y is less than $2x + 3$.

Sample Question 3: Word Problem

Question: A number decreased by 7 is equal to 12. Find the number.

Answer Key Solution: Let the number be x . The equation is $x - 7 = 12$. Add 7 to both sides: $x = 19$.
