## Understanding the AP Microeconomics Exam Structure

The AP Microeconomics exam assesses students' knowledge of microeconomic concepts and their ability to apply these principles to real-world scenarios. The exam is divided into two main sections: multiple-choice questions and free-response questions. Each section tests different skills, such as critical thinking, analysis, and economic reasoning, which are crucial for success in the course and the exam.

### Multiple-Choice Section

The multiple-choice section typically consists of 60 questions that students must complete within 70 minutes. These questions cover a broad range of topics, including supply and demand, elasticity, market equilibrium, and consumer choice. This section tests students' ability to quickly analyze economic data and select the most appropriate answer from several options.

## Free-Response Section

The free-response section usually includes three questions to be completed in 60 minutes. This section requires students to demonstrate deeper understanding by providing detailed explanations, drawing economic models, and solving quantitative problems. Free-response questions often involve real-life economic situations, requiring students to apply theoretical knowledge practically.
